EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Gregor N. Neff on August 17, 2007.

The application has been amended as follows: Claim 1 has been amended to read as follows:

A condiment dispenser for dispensing particulate materials, said dispenser comprising:

(a) an elongated tubular upper body portion with a central longitudinal axis, said body portion being substantially symmetrical about said axis and having an outer wall and a pair of opposed ends and a hollow interior for holding a supply of said materials;

(b) a top structure for closing said tubular body at one of said ends;

(c) a tubular bottom structure having a grippable outer wall and defining an outlet opening for selectively dispensing pre-measured quantities of said material through said outlet opening, and supporting said tubular body vertically on a support surface;

(d) said bottom structure including a rotor mounted to rotate about said longitudinal axis of said body and drivably coupled to said outer wall of said bottom structure;

(e) a holding structure having a plurality of material holding compartments of a shape matching the shape of said outlet opening;

(f) said rotor being drivable coupled to create rotation of said compartments relative to said outlet to successively discharge the contents of said compartments downwardly through said outlet;

(g) said outer wall of said bottom structure being aligned with said outer wall of said tubular body so that said outer walls together form the outer wall for said dispenser;

(h) said rotor has a substantially frustro-conical shape, with the largest diameter thereof at the bottom edge, said bottom edge defining a support plane for supporting said dispenser vertically on a support surface.

Claim 6 has been canceled.

Conclusion
